

The technical construction project consists of architecture, constructive and engineering part. The project is a base for receiving a construction permit and is required to perform construction works.

Our organization will offer you elaborate qualitative full construction detail designs and reconciliation at the Construction Authority. We'll elaborate a detail design for new construction and for reconstruction of any type of buildings and residential houses and for production building.

Project serves as a base and determines measures for all further construction.

Detail design – main document of each building site. Exactly the design states the principal technical solutions of the building or construction to be built: the constructional, production, operational and energetic. A detail design contains the descriptions of object construction, architecture and equipment in general, and of separate their parts. Detail designs allow determining the costs of construction site, provides the base for further successful construction.
